KLEANTRAK
OVERVIEW

The KleanTrak conveyor from UniTrak is a cleated belt conveyor specifically engineered to overcome the challenges of sanitary conveying. These conveyors are designed to allow easy cleaning in food, pharmaceutical, and other washdown environments.

KleanTrak features a sanitary design which dramatically improves cleanability and minimizes the risk of pathogen or allergen contamination. KleanTrak conveyors use a cleated FDA-approved belt in a patented tensionless drive system which provides no belt slippage or stretch. Frames are made from 304 stainless steel and a variety of finishes are available, including electropolishing.

Each KleanTrak conveyor is equipped with a washdown duty drive motor and corrosion resistant bearings. Conveyors can elevate from 15° to 90°, and available options include a stationary base with leveling feet, or portable base assembly.
